

## **SUGGESTION OF POTENTIAL REVIEWERS**

Authors may suggest up to five potential reviewers for his/her paper. Up to two of them may be experts from the same country, but not from the same institution or having had previous scientific collaboration. The remaining three reviewers must necessarily be experts from other countries, and the fact that they have not previously collaborated scientifically must also be respected. The name of each reviewer, the institution to which they belong and their e-mail address will be included.

This proposal by the authors does not imply any commitment by AGER to use such potential reviewers.

If it is included, the list of suggested potential reviewers should appear on the second page of the text document.
